

# Construction

## Overseas Commercial Construction

### Introduction

DasNet provides a full array of engineering services to design, build, operate, and maintain our clients' facilities. Our specialties include interior and exterior renovations, remodeling, building additions and complete construction of new buildings.

DasNet will tailor its services to your individual needs which may include design support, preliminary budgeting, resource and logistics planning, scope management, project scheduling, project administration, and supervision. Whether you need a modification to an existing facility or a completely new installation, DasNet accomplishes the job with excellence.

Services we provide include;

- Earthwork
- Foundations
- Carpentry
- Cabinetry
- Roofing
- Plumbing
- Electrical
- Drywall
- Heating and Ventilation
- Air Conditioning
- All Types of Custom Finishes

Our design/build capabilities encompass the entire spectrum of activities to successfully execute a project including concept and final designs, construction, and commissioning. Added to our core construction activities is our attention to workmanship and contracting details to arrive at a project that is successful for all involved. Our engineering and construction experience can be also put to work as Project Managers or Lead Engineers to manage large, complex projects.

**“Engineering Beyond Imagination”**

## Current Projects

### *Kandahar Multiple Award Construction Contract (KMACC)*

DasNet is a prime contract holder and is responsible for providing the Government with a construction project delivery method that can accommodate projects that range from simple carpentry work to complex project design and construction. This project is managed in Kandahar, Afghanistan, but is utilized throughout southern Afghanistan. To accomplish tasks under this effort, DasNet has teamed as prime with several leading construction companies to perform the actual tasks.

DasNet is currently involved with two major construction projects – a Joint Operations Center in Kandahar and a Stabilization Center in the same general area. These two projects involve the full range of construction services and allow for the deployment of multiple construction teammates.

On other projects, DasNet provided a two-story flat pack office building with installation to include concrete pads for trailer foundations, offloading trailers with a crane, assembling units, installing stairs, and electrical hook-ups. We have provided management, tools, equipment, transportation, supervision and labor necessary to restore a US Forward Operating Base project site. This project consist of demolishing and removing concrete pads, wet RLB units, underground septic tank, fencing, concrete barriers, tent shelters, supporting infrastructure, site grading and all associated site preparation. Additionally, we are involved with projects ranging from helicopter landing pads to dormitory buildings.

### *SeaPort-e*

DasNet provides resources for civil engineering technician support for projects within the NAVFAC NW AOR. Support includes: performing inspections; technical studies and evaluations; reviews, analyses, and preparation of designs and appropriate documentation for the citing, funding, operation, maintenance, repair and modification of facilities.

DasNet also supports mechanical, electrical, and other utility system repairs, construction, or maintenance to include the following: heating, ventilation, air conditioning, asphalt and concrete paving, foundations, and building electrical systems.

We also develop “work packages” by providing layout, scopes of work, cost-estimates, feasibility and technical studies and designs. As the Project Manager, we provide oversight and perform a variety of inspections of projects during construction phases.
