Complete Turnkey Command Center Solutions

Introduction

DasNet offers a turnkey solution for command and control facilities, from construction and remodeling to systems design to furniture manufacture to installation and training. We design, build and support full turnkey, net-centric video teleconference (VTC) display systems for the command and control center market to create a dynamic environment that connects the warfighter with information, displays and desktops in different sites and locations by harnessing the power of the Secure and Non-Secure networking. Our custom designed systems incorporate customized control room software and commercial-off-the-shelf (COTS) hardware from global leaders in VTC and server technology.

Our design process ensures that each phase includes multiple checkpoints to ensure exacting results. This turnkey solution is an ideal option for streamlining the setup of a security operations center or similar operation.

DasNet takes great care in the building, delivery, and installation of products. After your surveillance center or similar operation is up and running, DasNet is ready to provide additional support whenever you need it. Our skilled technicians, engineers, and designers are readily available to answer any questions you may have. In addition, our complete service package will guarantee support throughout the entire life of your operation.

“Engineering Beyond Imagination”

Current Projects:

Japan & Korean Projects

DasNet has executed many “cradle-to-grave” projects that required:

- Modernizing Command and Control facilities
- Renovating existing communication infrastructures
- Upgrading physical security automated access control systems
- Installing security sensitive fiber and Fiber SenSys SecurLAN equipment
- IT infrastructure capability upgrades
- Engineering designs to increase power capacity
- Customized, State-of-the-Art furniture
- Relocating secure room equipment, wired infrastructure, voice, data and visual information systems

Telecommunications Specialties:

- POP Stations
- Switch Rooms
- Generator Back Ups
- Battery Back Up Rooms
- Halon Systems (Fire Protection Systems)
- Computer Raised Floors
- Room Access Security
- Equipment Grounding
- Rack Systems
- Controlled Environments (Libert Units)
- Fiber Optics
