### Turnkey Solutions

DasNet Corporation, an 8(a) certified network integration firm, provides an array of complete turnkey communication solutions and services for clients in the United States, the Far East, and the Middle East markets. We provide network systems integration services throughout the complete communications range – from global satellite communications to wireless local area networks.

DasNet is backed by a staff of network integration professionals and engineering experts who have decades of experience in implementing systems using our proven program engineering methodology. A strong corporate infrastructure, gratification in what we do, and entrenched industry leaders as teaming partners have been key elements of our success.

So, whether you are contemplating a global communications system, or one suited to a much smaller area, let DasNet provide the solution!

We invite you to read more about why DasNet should be your #1 choice in communications network integration solutions.

*DasNet Corporation is a Network Systems Integration firm specializing in providing communications infrastructure solutions and services.*

## Commitment

DasNet has been providing turnkey communications solutions for years. We have installed satellite systems, microwave systems, numerous area networks, upgraded military command centers, and aided in the establishment of mobile communications units – all with utmost concern for our client’s needs, budget, and timeframe.

We at DasNet have a passion for what we do, believe in our abilities, and enjoy sharing our expertise with our customers. Our undertakings have allowed us to reach targeted projections in strategic markets, execute projects effectively – under budget, flawless implementation, integrated as designed; all the while building upon customer satisfaction, reliance, and belief in our methodology. At no juncture will we allow our corporate interests to intervene with the level or quality of service provided, interfere with schedules, restrict access to management, or deter the expectation levels you, the client, expect to receive. We remain just as concerned about our smaller everyday efforts, as we do about our large, multi-layered integration projects. Therefore, we welcome you, our client, along on our journey.....

*Our commitment to clients centers around our mission statement: “provide our clients with reliable, robust, superior integrated solutions, services, and products based upon our staff and executive team’s technical abilities, strong sense of pride, and commitment to excellence.”*

## The Journey

Anyone who has been through a large-scale project – even one labeled as “turnkey” - can look back and truly say they have been on a journey. Our goal, here at DasNet, is to make the journey for you, the client, a pleasant one. The key to the success of this network integration journey is communications among all stakeholders – you, the client, DasNet management, and any industry partners. We begin by understanding your requirement and end by providing you a system that meets your requirement. In doing so, we keep communication paramount - effective communication all along the way. Effective communication? Yes, when your project is handled by DasNet.

## Network Communications

DasNet provides network communications solutions like satellite systems, microwave towers and associated equipment, and local wireless area networks. We meet your need – no matter what the distance required may be.

## Command Center Upgrades

DasNet specializes in the upgrade of military command centers – from the establishment of the requirement, through the necessary engineering efforts, to final, turnkey completion.

## Mobile Communication

DasNet has assisted John Hopkins in creating a mobile Women’s Health Care Unit. The unit allows for health screening to occur in remote areas - foregoing the need for the patient travel to a diagnostic center or physician office. The test results are transmitted to an Image Reading Facility staffed by qualified radiologists via secure Internet link for viewing.
